Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach a reconfigurable memory comprising: M bit lines, where $M > 1$; a plurality of row lines; an array of memory storage cells, each memory storage cell storing a data value and comprising a circuitry for coupling that value to one of the bit lines in response to a row control signal on one of the row lines; a row select circuit for generating the row control signal on one of the row lines in response to a row address being coupled to the row select circuit, the row select circuit comprising a memory for storing a mapping of the row address to the row line, the mapping determining which of the row lines is selected for each possible value of the row address; and a controller for determining that one of the memory cells is defective and for altering the mapping to eliminate references to that row line that cause that defective storage cell to couple a data value to one of the bit lines.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Adams et al. (5,563,833) teach a method of using one memory to supply address to an associated memory during testing.
